Report for TB Meeting September

1) Attended the EFC webinar but found it focused heavily on municipal water treatment facilities. The webinar went through funding processes. The webinar explained how Community Assistance Teams work with municipalities to help them access water infrastructure funding. Coordinating with partner agencies including the Departments of Environmental Conservation, State, and Health, the teams help communities with their water infrastructure needs.

2) Ancramdale Bridge Update

Ray Jurkowski finally responded regarding the Ancramdale Bridge repairs. After conducting additional research it has been determined that the culvert carries County Route 8 in this section and it is a County culvert. After being contacted in 2022 regarding a sink hole in the shoulder area outside of the driving lane the county bridge crew made a road surface repair. The County has now placed it into their system and will continue to monitor the structure and evaluate the need for repairs.

3) Route 82/7 Intersection Update

Following our August meeting with Michael Wierzchowski, VP and Director of Traffic Engineering, we are anticipating receipt of the draft report for review at the end of September, and final report at the end of October. The report will be reviewed by the Town Board and shared with the public before any further action is taken.
